

ABSTRACT OF THE DISCLOSURE

2 A device for preventing unintentional removal of a guitar
3 strap from a guitar strap peg. The device includes a body for
4 positioning on the guitar strap peg, outboard of the guitar strap.
5 The body is disk-shaped and has a periphery, a throughbore
6 extending centrally therethrough, and a throughslot communicating
7 with the throughbore therein and the periphery thereof, and is for
8 allowing the neck of the guitar strap peg to slide therein, and
9 into the throughbore, and when therein, one surface of the body is
10 wedged against the head of the guitar strap peg, and an opposing
11 surface of the body wedges the guitar strap against the guitar, and
12 when doing so, prevents the slot in the guitar strap from escaping
13 past the head of the guitar strap peg, and in doing so, prevents
14 the guitar strap from being unintentionally removed from the guitar
15 strap peg.
